# Alumni Banquet May 13

## Interesting Program for All-day Reunion

The ANNUAL ALUMNI RE-UNION of the Boston University School of Medicine will be held Saturday, May 13, 1944. The Executive Committee has arranged a program

which should prove both instructive and entertaining. The interest in these meetings is increasing annually, and while this program is longer than that of other years, it is also very worthwhile. We hope every alumnus will want to attend, and you are invited to bring a guest. Let us show our new Dean, Dr. Charles F. Branch our interest and enthusiasm by having the largest attendance ever!

### PROGRAM FOR THE DAY

- 10:00 A.M. Clinical Meeting. Evans Memorial Auditorium.  
10:00 Dr. Chester S. Keefer, Professor of Medicine. Subject: "Penicillin."  
11:00 Dr. Leighton F. Johnson, Professor of Laryngology. Subject "Surgery for the Deaf."  
12:00 Dr. Howard M. Clute, Professor of Surgery. Subject: "Thiouracil and Its Use in Thyrotoxicosis."  
1:00 A.M. Informal Luncheon.  
Afternoon. Arrangements may be made through the Committee to obtain matinee tickets for current plays or to attend a baseball game, weather permitting.

5:30 P.M. Informal Reception for Dr. and Mrs. Charles F. Branch. Georgian Room, Hotel Statler. Cocktails and Punch. Sponsored by the Interfraternity Conference of the Medical School and the Women's Committee.

### 7:00 P.M. ANNUAL MEETING AND BANQUET

Georgian Room, Hotel Statler. Our President, Dr. Clifton B. Leech, will preside. The speakers of the evening include President Daniel Marsh, Dean Charles F. Branch, Dr. Howard M. Clute, Dr. Chester S. Keefer, and, as an added attraction, we will hear Mr. Neal O'Hara, the originator of the "Take It From Me" column in the Boston Traveler. Mr. Otto Page, President of the Senior Class at the Medical School, will say a few words for the graduating class, who will again be guests of the Alumni Association at the Banquet. Mr. and Mrs. Howard Brewer of Worcester will represent the Trustees. The business meeting and election of officers will precede the after-dinner speakers.

## Greetings from President Marsh

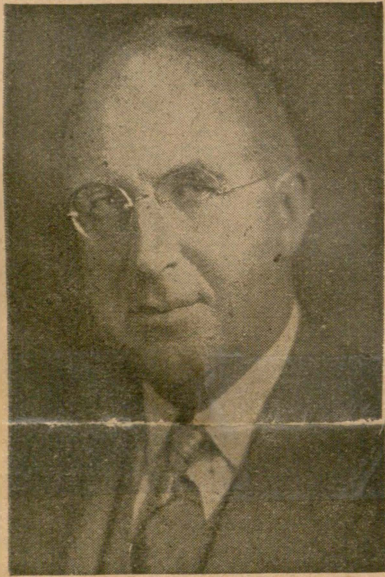

BOSTON UNIVERSITY  
BOSTON 16, MASSACHUSETTS  
OFFICE OF THE PRESIDENT  
688 BOYLSTON STREET

April 4, 1944

My dear Friends:

I welcome the opportunity to write this brief letter to the alumni of Boston University School of Medicine. The dominant characteristic of our School of Medicine for the past year might be described as life. There can be no life without growth, and growth always means change.

Our School has grown not only in the number of students enrolled but also in the quality of the students, in physical equipment, and in professional prestige.

Courtesy B. U. News  
Dr. Daniel L. Marsh

Change likewise has taken place in the School. The most striking change was the resignation of Dr. Bennett A. Avery as Dean of the School in order that he might accept an appointment which had been tendered him to become Director-General of Public Health of Iran. In his place, Dr. Charles F. Branch has been appointed Dean. I have been made very happy by the general approval given to this appointment. Everyone is expecting from Dean Branch a successful administration of the School's affairs.

Notwithstanding raids that have been made upon our faculty by the war, yet we have at the present time a faculty of distinction and ability. It is my firm conviction that no school of medicine in the country has a better faculty per capita than Boston University School of Medicine.

I cannot speak too emphatically of my deep appreciation of the intelligent and constructive way in which the Alumni Association displays its loyalty to the University in general and to the School of Medicine in particular. The present attitude of the alumni gives me full confidence of the continuing greatness and increasing service of Boston University School of Medicine.

Mrs. Marsh and I are already anticipating with pleasure seeing the alumni at the Annual Reunion Dinner on May 13.

Faithfully yours,  
DANIEL L. MARSH,  
President.

### IMPORTANT

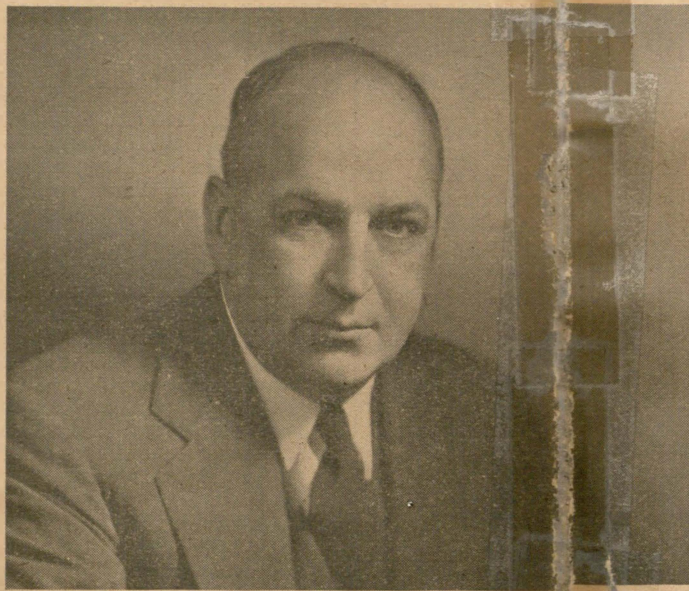

A postcard is enclosed with spaces to fill in your NAME, CLASS, RANK (if in service), HOME ADDRESS and OFFICE OR MILITARY ADDRESS. It is a constant problem to keep our alumni files up to date. If everyone returns this card PROMPTLY, it will be a great help in making our list accurate and complete.

## The New Dean's Report

### Dr. Branch Urges Concrete Program

As the students approach midyear examinations of the third accelerated program, medical schools administrators the country over begin to worry about de-acceleration. Strong forces are suggesting that acceleration be continued in one form or another. It

of a million dollars annually. It is constantly confusing and embarrassing to have to differentiate between "the old Evans building" and "the new Evans building." For purposes of convenience, the old Evans building is now commonly spoken of

DR. CHARLES F. BRANCH

is possible that its disadvantages have been over-emphasized and that its advantages have not been clearly outlined but in our school, acceleration has made it possible to keep standards at a satisfactory level. We look forward to that post-war day when those of us responsible for teaching the young idea how to shoot, may elevate our sights to a trajectory that allows a mature student time to digest and assimilate the fare prepared by an adequate faculty, not pressed with over-loads and with ample time for research and cogitation. We believe the only royal road to learning in medical education is in developing a disciplined mind through a disciplined curriculum.

The war has materially curtailed university income and if the budget can be balanced this year it will be a marvel of legerdemain. In spite of the fact that the medical school budget has been actually increased this year, the need for unincumbered fluid funds is more imperative than ever. One interesting offshoot of this problem has been the spontaneous formation of a parent's club sponsored early in January by Dr. David Fisher and Mr. Barnett D. Gordon, who have contacted the parents of men now in medical school,—already over \$4,500 has been collected for current needs of the school. They look forward this spring to formal organization to perpetuate this extremely valuable and unselfish work through the years to come. A few pertinent financial facts may interest you. Last year Boston University spent \$13,500 for microscopes to be used by the medical students. The assets of the building fund now stand at approximately \$129,000. Bequests of over one million dollars that will directly benefit the school of medicine are known to exist. The composite teaching salaries of those associated with the medical school faculty amount to more than one quarter

as "Building A" of Boston University School of Medicine; the old laboratory building is spoken of as "Building B", while the older part of the school housing the old laboratories is designated as "Building C". It is hoped that some philanthropic person will come forward with funds so that Building A may be designated as a memorial to some person or ideal.

(Continued on Page 3, Column 5)

## Dr. Leech, Alumni Head Stresses New Standing

### Says BU Gaining National Reputation

Among the 1,558 living alumni of the medical school there are 596 members of the Alumni Association. If our medical school were universally recognized as one of the best in the world, would not membership in the Alumni Association be a matter of such pride that every graduate would become a member? If we look frankly for reasons for lack of this degree of pride it is not too difficult to find them. Although the medical school for many years was recognized by Regents and others of authority as class A, yet there had been no widespread recognition of the school by the public. Previously, the school has had very little of the sort of legitimate advertising, in the way of research and clinical publications, which attracts the attention of the profession and which produces favorable publicity among the laity. In addition our school has been overshadowed in most outward respects, at least, by a prestigious neighbor. There has also been a sort of hangover from the days when the school was known as homeopathic, which in many quarters, rightfully or wrongfully, was considered an inferior denomination. Still another factor has been the somewhat antiquated appearance of the school buildings and immediate surroundings including the associated hospital.

That these matters have all changed markedly for the better is not completely recognized by many of the alumni, particularly those who do not reside in the immediate vicinity and who have not had occasion to see the improvements at first hand. It may be claimed without exaggeration that the faculty has a national reputation and that its work and publications are almost daily receiving attention in both the professional and public press. The new hospital building is a complete up-to-date unit which compares favorably with those in any of the great teaching centers.

We alumni, as such, have two aims on which all of us are agreed. We want to keep contact with our friends and classmates and maintain the tie with the Institution.

It is accurate to say that Boston University is all of us and the School of Medicine is all of you. If we do not fail the School the University cannot. For the active loyalty of alumni is not only a reliable index to present strength, but an accurate indication of future standing and influence. Whether this Institution or any institution is to prosper, or decline to mediocrity, will be decided in large part by the degree to which former students actively participate in its develop-

ment. Certainly none has ever achieved a position in the front rank without the active help of alumni; nor held that eminence long when alumni support has been removed.

Any agency which tends to encourage loyalty and alumni participation is therefore desirable, and an overall organization which coordinates these agencies into an effective expression of active loyalty is indispensable.

The Departmental Alumni Association, alumni clubs, and associations organized on the basis of special group interests, all have their place in the large scheme of alumni activities. And the Boston University Alumni Association is the one unifying agency which coordinates all expression of alumni interest. Within this structure, however, the one natural, essential and continuously effective association is the class. Automatically each year from the Medical School one of these compact units, ready made from four years of fellowship and common interest, takes its place among the "classes in service." The class will remain a distinct and potentially effective entity throughout some fifty or sixty years. Within this unit have grown the shoulder-to-shoulder, heart-to-heart associations in the classroom, the clinic, the laboratory, in the dormitory and in a thousand and one contacts of fellowship during four impressionable years in training.

In the reciprocal relationship between the alumni and the School and University the class is the natural agent. The obligation of the alumnus to his Alma Mater has a material as well as spiritual side, and therefore is more obvious. The Institution's obligation to the alumnus, however, does not end with Commencement. The diploma is neither a certificate of discharge, nor a severance of obligation on the side of the University. Her concern extends beyond your period of training; she still speaks to the alumnus in calm urgency of ethical standards and lasting values, and provides opportunities for professional contact through social meetings and refreshing programs. The class with its basis of intimate and personal regard can best act in the interest of a delicate relationship which is both practical and sentimental. No other organization, however effectively managed, certainly no merely professional or social organization can cover the whole range of alumni relationship or touch and hold alumni loyalty.

The Medical School alumni are fortunate in having efficient organization under the leadership of the President, Dr. Clifton B. Leech, and the Secretary, Dr. Frank E. Barton. The concrete evidence is in the services rendered to alumni of the Medical School in your reunions, and in such activities as the Alumni Fund Roll Call.

Under the leadership of Dr. Barton as chairman for the Medical School, the Fund Roll Call was especially successful. Dr. Barton, for

JOHN M. WILCOX, M.D.

## Secretary's Letter

Dear Fellow-Alumni:

At the last Annual Meeting in April, 1943, the following program was adopted:

- (1) Inauguration of a Continuation Course.
- (2) Interview system between alumni members and prospective pre-medical students.
- (3) Establishment of sectional groups.
- (4) Publication by the alumni association of a yearly Bulletin.

The Secretary is very pleased to report that the entire program has been carried out. It is also heartening to note that the membership in the Alumni Association has increased 20% in the last year. The Continuation Course held in September was attended by eighty-one graduates, representing members from the New England states and as far west as Michigan, and classes from 1876 to 1943. It was definitely established that these Continuation Courses will continue and become an annual event. The Board of Directors was very pleased with last year's attendance, and is confident that the enrollment will increase.

There have been recent improvements in both the faculty and the Medical School buildings, and if the B. U. School of Medicine is to continue to take an aggressive position in medical education, it will be necessary for the Alumni Association to back its endeavors with an ever-increasing interest.

In the past, far too little attention has been paid to the undergraduate. A good many left the School with the feeling that they had secured post-graduate education and had no further obligations. I believe that this misunderstanding can be easily corrected if the students are encouraged to participate in alumni functions while they are still matriculating. Proof of this contention is the fact that the Interfraternity Conference, initiated by our new Dean, Dr. Charles F. Branch, very enthusiastically accepted the responsibility of acting as co-sponsor with the Women's Committee of a reception before the Annual Meeting. Another step made in this direction this last year is that the graduating class now has the privilege of holding an election and electing its own class agent.

The Alumni Association has a definite obligation to our graduates in the service. They must be given assurance that they will be offered suitable rehabilitation courses at the end of the war. The Medical School and the general University are working on this plan at the present time, and the Alumni Association must go on record as being willing to cooperate in every possible way.

This Bulletin is a new but very necessary innovation if our members are to be versed in the progress of the School. Possibly it could be published quarterly or bi-annually, depending on the response given the first issue. In this event, an editorial staff should be selected. If the publication is to be successful it is absolutely essential that the mailing list be kept up to date. Please return the enclosed card immediately and keep us informed of your changes of address.

The Alumni Association has made definite progress, but there is much to be accomplished. To achieve our goal, we must have the individual help of every graduate.

Very truly yours,  
FRANK E. BARTON, Secretary

## Recent Activities and Publications of Members of the Hospital Staff and Of the Medical School Faculty

Dr. Leighton F. Johnson, '15, Professor of Oto-Laryngology, reports the recent appointments of Dr. G. B. Fred as Associate Professor and Dr. Edwin Holmes as Assistant Professor, both of whom have service at the M. M. H. Also that the fenestration operation, of which he has performed about 60, has been generally accepted for the relief of deafness from Otosclerosis. The fenestra is now made in the dome of the vestibule (novalis) and the results are definitely superior to the former technic of making a window in the external horizontal canal. That for the last two years acute surgical mastoiditis cases have been handled by filling the mastoid cavity with sulfadiazene and closing the wound by primary suture. The results have been excellent. That at present penicillin with primary suture is being employed on a series of acute mastoiditis cases with an apparent improvement.

Dr. Oscar F. Cox, Associate Professor of Medicine, reports that the Genitoinfectious Disease Division has been investigating the efficacy of penicillin in the treatment of gonococcal infections and early syphilis. So far as early syphilis is concerned nothing can yet be said about its curative properties. However, the very rapid disappearance of spirochetes, the early healing of lesions, and the systematic drop in the syphilitic antigen titer in the blood are most encouraging in view of the fact that to date penicillin has caused no toxic reaction in any of these cases.

It has been known for several months that penicillin administered over a fifteen-hour period to persons infected with the gonococcus resulted in cure in nearly one hundred percent. During the past six weeks a study has been under way to determine the efficiency of penicillin administered in the Out Patient Department for gonococcal infections. Sixty-nine patients have been treated and it appears that clinical and bacteriological evidence became negative within a few hours after treatment was started, with one exception in which positive cultures were obtained twenty-four hours after beginning treatment. This case, however, without further treatment reversed to negative on the third day after admission and has remained so for three weeks.

Dr. John G. Downing has been appointed Professor of Dermatology and Chief of the Dermatological Service at the M.M.H. Dr. Downing has a national reputation in the investigation and treatment of industrial dermatology.

Dr. Chester S. Keefer, as Chairman of the Committee on Chemotherapeutics and other agents of the National Research Council and Consultant to the Committee on Medical Research of the Office of Scientific Research and Development, has been acting as Responsible Investigator in gathering information concerning the value of Penicillin in the treatment of infections of interest to the armed forces. The distribution of Penicillin to civilian investigators has been centralized in his office.

Research on acute and chronic osteomyelitis with Penicillin has been carried on actively by Drs. Louis Howard, '23, and Donald L. Anderson, '40, of the hospital staff. Other research activities with Penicillin have been going forward in the hospital.

Dr. John J. Curry—cardiac disease, with special reference to the effects of pulmonary embolism on the circulation.

Dr. Louis Weinstein Research Assistant in Immunology has been working at the Haynes under a grant from the Johnson & Johnson Foundation, studying streptococcal infection and the effect of various chemotherapeutic agents for topical application in wounds and burns.

Dr. Robert W. Wilkins, Associate Professor of Medicine, and his associates, Dr. Stanley E. Bradley and Dr. Carl K. Friedland, are working on problems concerned with aviation

medicine, under contract with the Office of Scientific Research and Development and the hospital.

Dr. Joseph F. Ross, Welch Fellow in Medicine and member of the National Research Council, has been working on blood, blood derivatives, and blood substitutes under contract with the O.S.R.P.

Dr. Franz J. Ingelfinger, Instructor in Medicine, has been working on problems of nutrition and absorption from the gastrointestinal tract. A grant in aid by Brewer & Company, Inc., contributes to this work.

Dr. Francis C. Lowell, Instructor in Medicine, continues his work in allergy and immunology.

Dr. Malcolm M. Stanley, Assistant Resident in Medicine, and Dr. Nancy L. R. Bucher, United Drug Fellow in Medicine, are working with experimental diabetes under a grant from the United Drug Company.

Dr. Herman C. Patterson, Associate Professor of Pediatrics in the Hospital, states that the technique adopted some 5 years ago in the nurseries—cubicle isolation of the newborn and autoclaving of formulae—has resulted in the reduction of infant mortality to a very small fraction and the elimination of respiratory infections and infantile diarrhea.

Dr. C. Wesley Sewall, '14, Professor of Obstetrics, reports that an Rh factor determination is performed routinely in House and Private cases and that the administration of Vitamin K routinely to mothers during labor and to infants immediately after birth has practically eliminated hemorrhages of the newborn.

Dr. Frank E. Barton, Instructor in Surgery and Director of the Blood Bank and Transfusion Service, has published four articles on the management of the Blood Bank at the Massachusetts Memorial Hospitals. M.H.M. has the distinction of having had the first Blood Bank in New

England, and was co-sponsor with the Boston Lying-in and the Children's Hospitals of the first Rh factor Blood Grouping Laboratory in this section.

Dr. Chester W. Howe is now a full time instructor in surgery with his office in the Hospital.

Dr. Robert H. Williams and Dr. Howard M. Clute, Professor of Surgery, have been working on Thiouracil in the treatment of thyrotoxicosis. Dr. Sanford B. Hooker, '13, Professor of Immunology, has published a paper on Specific molecular valence of antigen and antibody with Dr. W. C. Boyd.

Dr. David L. Belding, '13, Professor of Bacteriology and Experimental Pathology, has published a Textbook of Clinical Parasitology Including Identification and Technic.

Dr. Burnham S. Walker, '34, Professor of Bio-chemistry, is Registrar at the School of Medicine.

Dr. Conrad Wesselhoeft and Dr. Samuel N. Vose, '18, Professor of Urology, report a method of surgical treatment of severe mumps orchitis which has been developed at the Haynes Memorial over the past few years. This method has been adopted by members of the medical department of the Army and Navy for treatment of this condition in the Armed Forces.

You will be pleased to know that Dr. Henry M. Pollack is still Superintendent of the Massachusetts Memorial Hospitals. It was his wish to retire, but the war and the building program have held up the date of his retirement. He is still the same friendly superintendent that you knew as a student.

Due to lack of space we are unable to publish a complete bibliography of all the recent publications by members of the faculty, but it is our intention to do so in another issue.

## The Interfraternity Conference Reports

This is just a note to B.U. graduates to let you know what is going on here at school. Most of us are either in the Army or Navy program, attending school the year round. However, except for the greatly accelerated program, activities are much the same. The different Fraternities are all functioning, as well as other societies, such as the Gregory group and the Begg Society. We still have our class and fraternity dances.

The appointment of Dr. Charles F. Branch as Dean a short time ago was most pleasing to all of us. One of the first things he asked of us was that some sort of a student representative group might be chosen to attend to many details of importance to the student body. Several of the Fraternities had already suggested to each other an inter-frat council, so now we have just that.

The Interfraternity Conference is composed of two members from each fraternity organization, which now makes ten members, with the Dean as faculty adviser. The purposes stated by the group are more or less as follows:

1. To create a better program of events and correlation between the different Frat programs for the benefit of the student body as a whole.
2. To carry on any project, educational or social, during the school year that the conference sees fit.
3. To expediate Fraternity matters and faculty relations.
4. To take an active part in the Alumni organization and to act in conjunction with it.

In line with this last point our first endeavor is the cocktail party we are sponsoring at the reception

for Dr. and Mrs. Branch to be given in conjunction with the Women's Committee at 5:30 P.M. in the Georgian Room of the Hotel Statler on May 13. We hope to see many of you then, and that sometime during Alumni Day you will give us an opportunity to show you our greatly improved buildings.

The active organizations represented in the Interfraternity Conference are as follows:  
The Gregory Society is composed of the women in school with Miss Marjorie Readdy and Miss Doris Newcomb as Conference members.

The Phi Delta Epsilon, with Saul Malkiel and Melvin Rodman as members, has been one of the most active Fraternities here at school, presenting a regular series of guest speakers, and also a symposium on the papers written by third year students.

The Lambda Phi Mu, with Columbus Gangemi and Anthony Galgano as representatives, is now rather small, but still active.

The Phi Chi is our largest Fraternity, and members to the Conference are John Selby and David Statham.

The Alpha Kappa Kappa Fraternity has grown up somewhat in the last two years and has had several interesting meetings lately with many of the faculty members present. Representatives are Donald Kyer and John James.

Thus it can be seen that even though we are working under an accelerated program and are on active duty either in the Army or Navy, we still have our school and all of its functions. Our spirit is just as good and our hopes are high. The Conference will be glad to hear from any of you, and is open for suggestions.

# New Evans Latest Addition to The Hospital Building Program

On May 12, 1942 the Trustees of the Massachusetts Memorial Hospitals opened the new Evans Memorial at 65 East Newton Street. Intimately connected to the Collamore Memorial, opened in 1936, it forms the latest unit in the hospital building program, and stands as a fitting climax to the inspired energy and

floor is given over to business, professional, and secretarial offices; clinic, electrocardiographic, and basal contains single rooms for the treatment of private patients, and two small wards for semi-private patients. There is a waiting room for patients' friends, relatives, and visitors; a chart room, and a small ward laboratory on the floor together with

present they are utilized for bacteriology laboratories as well as containing active units in hematology, gastro-enterology and peripheral vascular disease. A large library-conference room is available as well as the necessary service rooms for laboratory work.

At the time the new Evans was built, the University immediately negotiated for and occupied the old Evans building at 78 East Concord Street. Fortunately, this was remodeled in the summer of 1942 in time to allow for the expansion necessitated by the Army and Navy accelerated program. The offices in the old laboratory building of the Medical School were largely removed to the old Evans building so that the four major laboratories of Bacteriology and Pathology, Physiology and Pharmacology, Histology and Chemistry were able to expand laterally into the old office space. The administrative offices of the Medical School have been removed to the first floor of the old Evans so that they flank the large auditorium on either side. The entire second floor has been remodeled to form an enlarged and improved library, in this area second only to the Boston Medical Library. The library now has individual reading and research rooms and consists of approximately 12,000 volumes and 205 current periodicals. The third floor of the building has been remodeled to accommodate the offices and research of the Department of Pharmacology, Histology and Clinical Pathology. The fourth floor retains the Departments of Immunology and Chemistry in about the position previously occupied, while the rooms in the wing towards the old laboratory building are occupied by the Department of Physiology. The fifth floor, formerly the interns' quarters, is now occupied by the Department of Pathology.

Thus through the foresight of the Hospital and University Trustees the School is doubly blessed in that its teaching facilities, both clinical and preclinical, have been greatly enlarged and improved. In spite of this we are faced with a great many needs to do away with obsolescence and provide adequate research and teaching laboratories as well as proper class rooms. We badly need a new building. The housing of animals is a problem particularly acute in as much as they now have to be kept in space that should be otherwise assigned. It is impossible to say that our plant has not been greatly improved in the last two years, but this should not lull us into a sense of smug security and self-satisfaction.

Newton Street View of the New Evans Memorial Hospital

building genius of Dr. Henry M. Pollock.

The new Evans contains nine floors and provides services for the group of Hospitals, such as the kitchens, dining rooms, admitting, bookkeeping, and business offices, as well as the greatly enlarged wards, private rooms, and laboratories of the Evans Memorial. On the first floor are the kitchens for the hospital. Adjacent to these, but in an entirely separate area, is a modern laboratory of Pathology, a student laboratory, and a private entrance for the medical students. The second

the necessary service rooms. The fourth floor contains eight wards of four beds each, and two single rooms for the accommodation of patients, the general plan and arrangement metabolism rooms. The third floor being the same as for the third floor. The fifth floor has been left unfinished for the present so that space will be available for expansion when additional funds become available for clinical investigation.

The sixth floor is given over to the research laboratories which are quite the most modern of their kind in this section of New England. At

## A Message from The Director

BOSTON UNIVERSITY  
BOSTON 16, MASSACHUSETTS  
VETERANS RECEPTION CENTER  
OFFICE OF THE DIRECTOR  
688 BOYLSTON STREET

April 20, 1944

To the Alumni of the Boston University School of Medicine:

As you no doubt know Boston University has been assigned a heavy load in the various training programs of the Army and Navy. At one time this past winter more than eleven hundred enlisted men and officers of the Army and Navy were in training here. Now that these training programs have been decreased, the University has begun to accelerate its planning for the training of returned servicemen.

There has been established within the University a Veteran's Reception Office charged with the responsibility of serving the special needs of the returned servicemen who wish to come to the University after their retirement from the Service.

It is perfectly clear that a very large number of veterans are going to want some kind of University training. The type of training desired will vary between wide limits and will include, cultural training in the Arts and Sciences, vocational training in many fields, pre-professional and professional training of all kinds. In addition we feel that many men who have left their professions to enter the Armed Services will want short-term refresher courses on coming out of uniform, before re-entry into the practice of their professions. This we know will be true in the case of Law. We believe it likewise will be true in the case of Medicine.

Boston University expects to be ready on many fronts to receive its Alumni, former students and others upon demobilization. It expects to have ready the many types of programs necessary to meet the needs of all these groups. It is by so doing that Boston University can justify its existence in the minds of those men and women who have sacrificed so much in behalf of institutions like our own. It is for the freedom of institutions such as Boston University that makes a Victory worth working and fighting for.

As Director of the Veteran's Program at Boston University, let me address you men in the Service by saying that we want to ever be in a position of helpfulness to you, not only now when we feel so helpless, but also when you return to civilian life. We solicit your interest and advice.

Sincerely yours,  
CHESTER M. ALTER,  
Director.

## Sectional Groups

One of the four points included in the program outlined in our Annual Meeting of 1943 was the establishment of Sectional Groups to hold alumni meetings in their own vicinities. We are pleased to report that some progress has been made in this direction, although permanent organizations may have to await the end of the war, so depleted are our alumni ranks in some localities.

Dr. Joseph E. Porter of the Maine General Hospital in Portland has accepted the position of chairman of the Maine Section, and is building a skeleton group which will carry on some sort of program until it can really become effective in arranging post-war rehabilitation courses. Dr. David G. Ljungberg has been asked to bring together a similar group in Worcester, and Dr. J. Mark Hiebert in New York. The Alumni Association has set aside \$500 to arrange for trips by Dr. Charles F. Branch, accompanied by either Dr. Samuel N. Vose or Dr. Kenneth Christophe or both, to speak to these groups when they have meetings and inform them on Medical School activities. If a group in any other locality feels it has the nucleus of such an organization, please communicate with us, for the Alumni Association would be very pleased to endorse the project and cooperate with arrangements to hold a meeting. Other schools have long been active in this field, and while we realize that this is a difficult time to organize, we are confident that its value will be especially appreciated in post-war work, and now is the time to build for that future.

## Dr. Branch Urges Concrete Program

(Continued from Page 1)

Those of you who have not been back since the hospital and school made major changes in their physical plant should make a real effort to return and inspect both of these additions to our teaching armamentarium. In writing to the alumni we wish to invite you to avail yourself of all facilities of the school and hospital. Whenever in town please make a point of coming in for a chat with old friends still on the staff and faculty. It will be a real pleasure for them to show you the improvements.

In considering the future development of the school we must build a concrete program. Of necessity this will be composed of many parts but it must have a cohesion of the whole, hearty, unselfish co-operation, and no element of defeatism or obstruction.

## Med School War Program

In school at the moment we have 251 students, divided as follows:

Army	Navy
1 ..... 42	1 ..... 19
2 ..... 45	2 ..... 15
3 ..... 45	3 ..... 3
4 ..... 34	4 ..... 7
	<hr/>
	166
	54
Draft Exempt	Draft-deferred
1 ..... 3	1 ..... 2
2 ..... 2	2 ..... 2
3 ..... 3	3 ..... 2
4 ..... 6	4 ..... 1
	<hr/>
	14
	5
Women	
1 ..... 3	4 ..... 4
2 ..... 1	
3 ..... 4	
	<hr/>
Total	251

These students all made direct application to the School and were accepted in the regular form by our Committee on Admissions. The same will hold true for the class which enters in October, 1944, except for about 16 places which have been reserved for the Navy. These naval candidates will be assigned to this School after having been passed upon by a Committee of Deans representing the medical schools of the First Naval District. The Committee of Deans acts as a super-admissions committee considering each candidate by the same criteria as though he were applying to the individual school. Qualified naval candidates are permitted to express a choice of school. The Navy has

stated that the intention is to permit such free choice as far as possible. The preference in choice will be given to the superior students.

In the class which enters in 1945 we expect a similar contingent of Navy men together with a larger group from the Army. The exact size of this Army group is not clearly known at present. We presume that it will be about 23 students. These men also were selected by a special screening board consisting of representatives from the medical schools in the First Service Command. Choice of schools is not offered to Army candidates. This means that under present indications the number of students in uniform entering this School will decrease beginning with the 1945 class.

At present Selective Service regulations permit the deferment of premedical students who are certified by their college, accepted by a medical school and approved by the National Roster of Scientific Personnel in Washington. It is expected and hoped that a fair number of highly qualified premedical candidates will take advantage of this opportunity for continuing their medical training. The certification through the National Roster, which is under the direction of the War Manpower Commission, serves to remove any stigma of evasion of duty from such candidates. They are continuing in Medicine with the full approval of the Manpower authorities and with the full understanding that a steady flow of men trained for the medical profession is essential to the prosecution of the war.

Old Evans, Now Building A of Medical School Group

# Dr. Charles F. Branch, Our New Med School Dean

On February 18, President Daniel L. Marsh announced the appointment of Dr. Charles F. Branch as Dean of the School of Medicine. Dr. Branch succeeds Dr. Bennett F. Avery, who resigned to accept a position as Director General of Public Health in Iran.

Recent graduates will remember Dr. Branch as the very genial and efficient Professor of Pathology. He first became a member of the faculty in 1926, serving as Assistant Professor of Pathology. He was promoted to Associate Professor in 1928, and has held the rank of Professor since 1932.

Dr. Branch was born in Amherst, Massachusetts, on August 14, 1897. He took his preparatory work at St. Johnsbury Academy, attended the University of Vermont from 1917 to 1919, and graduated from the University of Vermont Medical School in 1923. In 1924 he married Annie E. Sargent, also a graduate of the University of Vermont. They have one child, Betty Ann, and reside in Waban.

Dr. Branch has been associated with the Boston City Hospital, the Jefferson Medical School and Jeffer-

son Hospital, and the Philadelphia General Hospital in Philadelphia. He is now Pathologist and Director of Laboratories, and Associate Director of Evans Memorial at the Massachusetts Memorial Hospitals in Boston, and serves as Consulting Pathologist at many other hospitals. He is an active member of numerous medical and fraternal societies.

Dr. Branch has recently been engaged in several military endeavors, including an appointment as surgeon in the U. S. Public Health, Emergency Medical Section, and a six weeks visit to Central America for the investigation and study of tropical diseases. He is the author of many articles on pathological subjects, with special emphasis placed upon cancer. He spent some time in Europe in 1932 on Medical Education, Pathology and Cancer research.

In Dr. Branch we have an enthusiastic and capable Dean, and he has already evolved an inspiring and constructive program, some aspects of which are mentioned in other articles in this Bulletin. The Alumni Association pledges its whole-hearted support.

# Major Frank J. Twadelle, Class of '29 is Decorated

Major Frank J. Twadelle has received the Legion of Merit award from Brig. Gen. William R. Woodward for action on Guadalcanal. The bare official words hint at a story that would be well worth hearing, but the citation itself is as follows:

Headquarters USAFISPA

APO 50

Oct. 16, 1943

Gen. Orders No. 300

Major then Captain, Medical Corps, United States Army, for exceptionally meritorious conduct in the performance of outstanding services during action against the enemy from 8 December 1942 to 1 March 1943, at Guadalcanal. As Commanding Officer of a medical company, he displayed exceptional efficiency and initiative in several difficult operations. During heavy fighting in the vicinity of the Ma-

tanikau River, he supervised the evacuation of casualties over exceedingly dangerous terrain and was instrumental in improvising unusual methods of evacuation by the use of cable tramways and boats. In the region of Doma Cove, the company was cut off from higher headquarters and had to operate independently for several days. Despite being disabled by fever and from exhaustion, Major Twadelle carried out his duties efficiently. As a result of much hardship and neglect of personal welfare in order to render medical care to the wounded, he was hospitalized for a period of two months. Major Twadelle's exceptional devotion to duty and courage is in keeping with the highest traditions of the Army Medical Corps. Residence at appointment: Wellesley, Massachusetts.

# The Women's Committee

The Women's Committee, under the leadership of Dr. M. Gene Black, '29, has just been formed, but we hope it will become a permanent part of the Alumni organization. Other members of the Committee are Alice Woodman, '03, Florence Belyea Hopkins, '15, Ann Manton, '25, Margaret Blair Hunt, '30, Julia G. Arrowood, '33, Frances H. Smith, '43. Their first endeavor is to plan for the women graduates who are returning for the Alumni Reunion on May 13. They hope to have a dressing room for the use of alumnae who are coming from out of town and wish to attend the whole day's program. They are co-sponsors with the Interfraternity Conference of the reception for Dr. and Mrs. Branch which is to be given before the banquet. In addition to making these plans Dr. Black has undertaken to make arrangements for any graduates who wish to attend a matinee in the afternoon. Dr. Black has reserved a block of thirty seats for "Dream with Music," a popular musical comedy with Vera Zorina which will be playing at the Shubert. The balcony seats which are reserved at \$2.40 each, and Dr. Black hopes that you will send in your requests as soon as possible so that we may keep these seats and reserve more if necessary. If there is any other show which you would rather see, Dr. Black will also be pleased to reserve seats for it. We know the Women's Committee is filling a very much needed function, and we hope our alumnae will show their interest and support by a large attendance May 13.

# Dr. Butler Praises Med School Alumni

(Continued from Page 1)

of functioning class agents of any School or College in the University. Considering its size the Medical example, had the most complete list School Alumni made a remarkable record, standing fourth among the eleven Departments of the University in total subscriptions. The total for the Medical School was \$2837.50 in 1943.

During the past year a plan was put into effect for alumni interviews with high school seniors who plan on entering the field of Medicine. This functions through the cooperation of Dr. Barton, the Dean of the Medical School, and the Boston University Alumni Office, and School and College Relations. This plan provides for alumni help in sizing up the youngster and a report to the Medical School on the candidate's qualifications. It is believed that this plan will afford a worthwhile service to young people and result in steering desirable students to apply for admission.

It is our firm conviction here in the Boston University Alumni Association that whatever strengthens the Medical School Alumni Association will aid the University. We hope you will call on us for any help that we may render, and invite suggestions for improving our services to you individually and as a group.

JUDSON REA BUTLER

# Boston University School of Medicine List of Alumni in the Armed Services

(Note: We realize that this list is incomplete and inaccurate, but it is the best we have at this time. If everyone returns the card inclosed with this Bulletin with his name and address on it immediately, we may have a more accurate list to publish in another issue.)

- Batchelder, Hollis, '06, Colonel.....Army

# Med Alumni Class Agent List

- This is the list of Medical School alumni who are functioning as class agents in the Alumni Fund Roll Call for 1944. It is one of the most complete lists of any of B.U.'s schools, but there are still some classes without an agent. Perhaps this can serve as a reminder to those who have been asked to serve but have never sent their acceptances (or refusals) to Dr. Frank E. Barton, Chairman, or to any others who might volunteer to assume this simple duty. There are also a few on this list who have not yet contacted their classes by letter, and they are urged to do so as soon as possible. Whether they have heard from their agent or not, graduates may send their contributions to the agent designated on this list, or to the Alumni Office in care of Dr. Barton.
- Contributions may be marked for use by the Medical School,
- 1896—Henry H. Amsden
- 1898—Francis X. Corr
- 1900—Herman Christophe
- 1904—Edward S. Calderwood
- 1907—Clarence R. Hines
- 1909—Leslie P. Leland
- 1910—Harold Babcock
- 1911—Helmuth Ulrich
- 1913—David L. Belding
- 1914—C. Wesley Sewall
- 1915—Ralph H. Hopkins
- 1916—Milo C. Green
- 1917—Harold L. Leland
- 1918—Samuel N. Vose
- 1919—Clifton B. Leech
- 1920—Eleanor Ferguson-Howard
- 1921—Edgar C. Yerbury
- 1922—Jacob Abrams
- 1923—Louis G. Howard
- 1924—William L. Krieger
- 1925—Ann P. D. Manton
- 1926—Clifton T. Perkins
- 1927—L. Curtis Foye
- 1928—Luman A. Woodruff
- 1929—Kendall B. Crossfield
- 1930—Nathan Fineberg
- 1931—Orland F. Smith
- 1932—J. Mark Hiebert
- 1933—Raymond Gadbois and Julia Arrowood
- 1934—Burnham S. Walker
- 1935—Reginald S. Hunt
- 1936—Bertha O. Fineberg
- 1937—Samuel E. Paul
- 1938—Theodore A. Potter
- 1939—Fredrick F. Yonkman
- 1940—Ralph Mankowich
- 1941—Franklyn D. Berry
- 1942—Martin Bradford
- 1943—R. Emerson Sylvester
